

# Auto Password Generator

## Overview

---

Auto Password is a simple Python script that generates secure passwords automatically. This tool is designed to help users create strong and unique passwords for their online accounts, enhancing security and reducing the risk of unauthorized access.

## Features

---

- Generates random passwords with customizable length and complexity.
- Saves generated passwords to a text file for easy access.
- Simple and user-friendly interface.

## Requirements

---

- Python 3.x
- No additional libraries are required.

## Installation

---

1. Clone the repository:

```
git clone https://github.com/Subhajitmaji07/Auto_password.git
```

2. Navigate to the project directory:

```
bash
```

RunCopy code

```
`1cd Auto_password`
```

## Usage

---

To generate a password, run the following command in your terminal:

```
bash
```

RunCopy code

```
1python auto_password.py
```

You will be prompted to specify the length and complexity of the password. The generated password will be saved in `password.txt`.

## Example

---

Here's an example of how to use the script:

1. Run the script:

```
bash
```

RunCopy code

```
1python auto_password.py
```

2. Follow the prompts to enter your desired password length and complexity.
3. Check the `password.txt` file for your generated password.
